

Dear Parents,

At the Amani Public Charter School we hold an emphasis on higher level thinking throughout the curriculum. Having scholars think and problem solve during science is a key aspect of our science curriculum. We are excited to inform you that your child will be completing a science project as part of their participation in our Academic Fair during the week of June 15th, 2022! Please note that this project will count towards their overall Science GPA for the marking period and is due on

Thursday, May 26th, 2022.

This event encourages students to think like young scientists. In the next month or two your child will be designing a science project using the scientific method to solve a problem. We hope you agree that the educational benefits are many, as scholars develop skills for creative thinking and problem solving.

Each student will be given a packet for his or her project. Be sure to comb through the packet and discuss it thoroughly with your child. Most of the work will be done at home, however we will provide some time once a week during class to help by talking to the scholars about expectations, monitoring their progress, etc.

We ask that you encourage your child and monitor their progress along the way. Your support is the key to a successful project, but please do not allow your participation to extend further than evenhandedness in support and promoting student learning! It is important that you allow your child to struggle with problems and try to solve them. Help your child through the process wherever you can, but let the final product reflect your child's individual effort and design.
